SCALE FOR PROJECT MINISHELL (/PROJECTS /42CURSUS-MINISHELL)

You should evaluate 2 students in this team

Git repository

git@vogsphere.42vienna.com:vogsphere/intra-uuid-f331d3bc-10cd-4f28-9

Introduction

Please comply with the following rules:

- Remain polite, courteous, respectful and constructive throughout the evaluation process. The well-being of the community depends on it.
- Identify with the student or group whose work is evaluated the possible dysfunctions in their project. Take the time to discuss and debate the problems that may have been identified.
- You must consider that there might be some differences in how your peers might have understood the project's instructions and the scope of its functionalities. Always keep an open mind and grade them as honestly as possible. The pedagogy is useful only and only if the peer-evaluation is done seriously.

Guidelines

- Only grade the work that was turned in the Git repository of the evaluated student or group.
- Double-check that the Git repository belongs to the student(s). Ensure that the project is the one expected. Also, check that 'git clone' is used in an empty folder.
- Check carefully that no malicious aliases was used to fool you and make you evaluate something that is not the content of the official repository.
- To avoid any surprises and if applicable, review together any scripts used to facilitate the grading (scripts for testing or automation).
- If you have not completed the assignment you are going to evaluate, you have to read the entire subject prior to starting the evaluation process.
- Use the available flags to report an empty repository, a non-functioning program, a Norm error, cheating, and so forth.

 In these cases, the evaluation process ends and the final grade is 0, or -42 in case of cheating. However, except for cheating, student are strongly encouraged to review together the work that was turned in, in order to identify any mistakes that shouldn't be repeated in the future.
- Remember that for the duration of the defense, no segfault, no other unexpected, premature, uncontrolled or unexpected termination of the program, else the final grade is O. Use the

ovaluated student and mak	ke the time to explicit the reasons with t		
evalualea sidaetti ana mak	e sure both of you are okay with this.		
,	bsence of memory leaks. Any memory	allocated on the heap must	
be properly freed before th			
ou are allowed to use any of the different tools available on the computer, such as eaks, valgrind, or e_fence. In case of memory leaks, tick the appropriate flag.
